2. Citations and explanations (Rule 70.7)

1) Reference is made to the following documents identified in the International Search Report:

D1: EP 0427418 A1
D2: EP 0403465 A1
D3: US 5688515 A
D4: WO 2000-64819 A1

2) D1 discloses the use of bromosulfamate as a bactericide and fungicide in a system having a nitrite-containing corrosion inhibitor. And it comprises reacting sodium hypochlorite or chlorine and so on.

D2 discloses a biocidal composition for use in recirculating water systems comprising a hypochlorite donor and a bromide ion donor. Hypochlorite donor is an alkali metal hypochlorite, and alkaline earth metal hypochlorite.

D3 discloses a water stable tablet for recirculationg water systems that provides release of hypobromous acid.

D4 discloses a method for sanitizing water which comprises introducing into water sulfamate source from sulfamic acid or a water-soluble sulfamate salt and bromide salt followed by introducing enough oxidant to maintain the concentration.

3) The prior art provides oxidizing biocides by producing hypobromite in advance through prior reaction, meanwhile the subject-matter of claim 1 and claim 20 relates to a method for preparing a biocide and a method for controlling the growth of microorganism comprising the steps of preparing stabilized alkali or alkaline earth metal hypochlorite having a pH at least 11 and preparing a bromide ion source and adding the bromide ion source into the stabilized alkali or alkaline earth metal hypochlorite.

The method of the present invention is accomplished while maintaining the stabilized hypochlorite along with the bromide ion in an unreacted state, thus not producing hypobromite. In doing so, hypochlorite is stabilized using a stabilizer, and bromide ion is then added, giving enhanced durability as well as disinfection efficiency at an initial stage. Thus the method in the present invention is capable of maintaining its biocidal activity for a long time.

Therefore, the subject-matter of claim 1 and claim 20 is not disclosed or suggested in prior art and also is not obvious to a person skilled in the art.

As a consequence, the subject-matter of dependent claims 2 to 19 and 21 to 23 is also novel and inventive and meets the requirements of Article 33(2) and 33(3) PCT.

It appears that the claimed subject-matter is industrially applicable.
 Therefore, the subject-matter of Claims 1 to 23 meets the requirements of Article 33(4) PCT.

10

The data in Tables 12 and 13 show an identical pattern When a stabilized sodium to the data from Example 4. hypochlorite solution (I+II) prepared using a stabilizer before addition was added to the pilot cooling tower, the content of total halogen residual was reduced in a slower manner than the case where a mixture solution (II+III) comprising a stabilizer and sodium bromide ion and sodium hypobromite were individually added. Thereby, 15 demonstrated that hypochlorite stabilized by sulfamic acid before addition may be more effective than hypochlorite This result is stabilized in the pilot cooling tower. the rapid loss of highly volatile due to partially unstabilized hypochlorite. 20
